PROFILE

Graduated in Computer Science from the University of Turin, Italy. I am always eager to challenge myself and learn new things. I have three great passions: the web, cybersecurity and video games.

I currently work as a Full Stack Developer with a focus on Angular and .NET. I build dynamic, modern and responsive interfaces along with the backend services behind them, paying particular attention to accessibility, user experience and code quality. I work in agile teams, collaborating with design and product colleagues to deliver web solutions that are effective and maintainable over time.

LANGUAGES

10/10

Italian

7/10

English

SKILLS

Frontend: Angular, TypeScript, JavaScript, HTML, CSS/SCSS

Backend: C#, .NET Core, Entity Framework Core

APIs & data: REST API, SQL Server, SQL

Tools: Git, Visual Studio, VS Code, Agile

EDUCATION

BSc in Computer Science

Department of Computer Science (Turin)

2017-2023

High School Diploma

Scientific High School – Applied Sciences

2016

EXPERIENCE

Full Stack Developer at Orbyta since 04/2023

From 02/2025 to present at BasicNet

Involved in the **4Shop** project. **4Shop** is Basicnet's B2B e-commerce platform, designed for multi-brand and multi-market wholesale. It allows customers and agents to browse the catalogue, build pre-order and replenishment orders and follow them through to confirmation, while the back-office manages stores, assortments, price lists and master data from a single place.

Technologies: Angular, .NET, Entity Framework Core, SQL Server, REST API

From 07/2024 to 01/2025 at Engineering

Yoda UI is an application developed for **Costa Crociere S.p.A.**, dedicated to managing and defining cruise pricing. The tool is used by the company's business analysts to support the pricing process and the analysis of commercial strategies.

Technologies: Angular, TypeScript, CSS

From 06/2023 to 06/2024 – Orbyta internal project

I worked on the **Octopus** project for Orbyta Engineering, an internal management system. For the first 3-4 months I worked as a full stack developer, then focused mainly on the Frontend, building and integrating custom components such as calendar and dropdown, in collaboration with the UI/UX team and following Agile methodologies.

Technologies: Angular, .NET Core, Entity Framework Core, C#, SQL, REST API

From 04/2023 to 06/2023 – Orbyta personal project

During my first months at Orbyta I built a small personal project to consolidate my technical skills: a simple application with a login/registration page and display of data coming from the backend.

Technologies: Angular, .NET, Entity Framework Core, Microsoft SQL Server

DRIVING LICENCE

A, B

From 12/2022 to 01/2023 at Torino Outlet Village

Sales Assistant and Storekeeper at Gucci.

From 01/2022 to 12/2023 at Torino Outlet Village

Steward.

From 2022 to 2023 at One Group

ATP driver.

From 10/2017 to 04/2023 at Juventus

Steward at the Juventus Museum and Steward / unit leader at the Juventus Stadium.

UNIVERSITY EDUCATION

Main projects:

- Programming I, II and III: the courses covered all the fundamental concepts of object-oriented programming (encapsulation, inheritance, polymorphism), using Java as the reference language. Programming III: development of the graphical user interface with JavaFX. The project structure is based on the MVC pattern and follows the Observer/Observable principles: the views were built as .fxml pages and communication between views and model is mediated by controllers through JavaBean property binding.

Client-server e-mail messaging is handled using the Socket classes provided by the java.net library.

- Operating Systems: group project using C as the reference language. The project covered the management of communication between concurrent processes using the main IPC mechanisms.

- Algorithms and Data Structures: group project using Java and C as reference languages. The project involved implementing the algorithms studied during the course: sorting algorithms, dynamic programming, priority queues, graphs.

- Databases: development of a relational database through the following phases: conceptual design, logical design and implementation (DDL and DML).

- Software Application Development: complete development of the technical documentation of a software application following the Agile Unified Process (UP) methodology. Requirements definition and analysis, domain model, sequence and interaction diagrams, class model, and implementation using Java as the reference language and the JavaFX library for the user interface.

- Web Technologies: creation of a web page using technologies covered during the course: HTML, CSS, JavaScript, Ajax.
